

Request for Launch Services — Orion Comsat Program

Section 3: Mission Parameters

The spacecraft has a launch mass of approximately 5,200 kilograms and must be delivered to a Geostationary Transfer Orbit (GTO). Final orbit raising to GEO will be performed by the spacecraft's own propulsion system.

The program budget ceiling for launch services is \$85 million. Contract award to launch readiness must not exceed 24 months. Inclination requirements are customer-defined based on the ground station network footprint.

Offerors should address vehicle heritage, schedule margin, and integration requirements in their proposal.
